

Another Quality Look From Boral

BST SLIDING WINDOW

Boral Exclusive Style and Strength

At Boral we're proud of the hard wearing, durable and stylish performance of the BST with the smoothest sliding window movement ever seen in Australia. The secret to this smooth action is the revolutionary sash carrier featuring stainless steel ball bearings. The exclusive engineered plastic housing ensures the maintenance free life of the carrier. Other features include centre locking for easier opening and optional keylock handle. Optional 90, 135 and 180 degree couplings allow the flexibility to cater for bayframes, corner and straight coupled windows. The Boral BST Sliding Window is available in Colonial, Federation and modern styles beautifully finished in quality exterior grade powder coated and anodised finishes. These finishes are available in a wide choice of decorator colours which makes matching to bricks and roof tiles a breeze. The innovative design complies with the stringent quality standards of AS 2047-1977 and AS 1288-1989.
