

Another Quality Look From Boral

SLIDING DOOR

Boral Exclusive Style and Strength

The safe choice for your home is Boral's Mark 5c sliding door. Standard size range is available in clear and grey toughened safety glass featuring an accident-prevention motif. These doors are manufactured from strong, corrosion resistant, low maintenance aluminium with a screw adjustable roller system for smoother, quieter action. PVC gaskets and polypile stripping ensure the doors are weather, dust and draught resistant while twist-in Zincanneal steel fixing straps grip firmly into cavity brick walls on both sides and gutter type sills are complete with full length baffles. Even after installation, the sliding panels may be quickly and easily removed and their slide direction changed. Available in a range of anodised and powder coated paint finishes, Boral sliding doors can be supplied with optional external sliding flydoors or grille safety flydoors. The innovative design complies with the stringent quality standards of AS 2047-1977 and AS 1288-1989.
